Female Genital Mutilation

Policy Position Statement

Key message: Worldwide more than 200 million girls and women are living with Female Genital Mutilation (FGM).

FGM is strongly associated with adverse obstetric outcomes and serious immediate and long-term physical, sexual and psychosocial complications resulting in excruciating injuries, disability and death.

FGM is a public health issue demanding attention in Australia given the increased migration of women and girls arriving as migrants or refugees from countries where FGM is prevalent

Key policy positions:

1. Funding is required to support research on prevalence and prevention efforts.
2. Accessible and competent services are needed to assist in the prevention and holistic management of FGM.
3. Health professional education and training is required to address gaps in FGM related knowledge skills and practice.
4. FGM community education and parenting programs that involve families, women and men should be developed.

Audience: Federal, State and Territory Governments, policy makers, program managers, other professional and non-government groups.

Responsibility: PHAA Women’s Health Special Interest Group

Date adopted: 26 September 2018

Contacts: Dr Angela Dawson, Convenor Women’s Health Special Interest Group
Female Genital Mutilation

Policy position statement

PHAA affirms the following principles:

1. The care of women with FGM must be guided by the World Health Organization’s best practice recommendations on the management of health complications for FGM based upon sound practical judgement designed to ensure little to no risk of harm to health.1

2. Educational interventions in clinical and community settings for parents reduce abuse and neglect and improve health outcomes for young children.2, 3

3. Behavioural change leading to the abandonment of FGM is most successful when communities are engaged4, 5 and health promotion for communities affected by FGM should be guided by the National Education Toolkit.6

4. Comprehensive legislation and health professional and community education about the law is important to prevent FGM.7

PHAA notes the following evidence:

5. Sustainable Development Goal Target 5.3 within the Goal 5 of gender equity is to eliminate all harmful practices, such as child, early and forced marriage and female genital mutilation.

6. FGM is a practice performed on infants and girls as young as two years that involves the partial or complete removal of the external female genitalia or other injury to the genitalia for non-therapeutic reasons.

7. FGM constitutes a form of gender-based violence and child abuse.

8. Worldwide more than 200 million girls and women are living with FGM.8

9. FGM is strongly associated with adverse obstetric outcomes and serious immediate and long-term physical, sexual and psychosocial complications resulting in excruciating injuries, disability and death.8

10. All States and Territories in Australia have passed criminal legislation prohibiting FGM.9

11. FGM is a public health issue demanding attention in Australia given the increased migration of women and girls arriving as migrants or refugees from countries where FGM is prevalent.

12. Despite a lack of national prevalence data the number of affected women in Australia has been estimated at 48,505 which has increased by 11% since 2009.10
PHAA Position Statement on Female Genital Mutilation

PHAA seeks the following actions:

13. Health professional education and training must be provided to address gaps in FGM related knowledge skills and practice.\textsuperscript{11, 12}

14. Specialist hospital services in maternity units that serve communities where there are women from FGM prevent countries should be provided to increase the detection rate of FGM and improve obstetric management of women with FGM.\textsuperscript{13}

15. FGM community education programs should be adequately resourced to deliver State and territory wide programs and involve men as well as women.

16. Parenting programs tailored to the needs of new mothers and fathers from FGM prevent nations should be co-produced to improve their social support, self-efficacy and prevent FGM.\textsuperscript{14}

17. A multi-sector, multiagency approach is needed to identify children at risk or those who have been cut, and co-ordinate appropriate response and rapid referral pathways.\textsuperscript{15}

18. Data about FGM prevalence and frequency of use should be routinely collected to inform health service planning.

PHAA resolves to:

Advocate for the following actions to be taken based on the principles in this position statement.

19. The development of a national comprehensive sexual and reproductive, health strategy that includes action on the prevention of FGM.

20. Standardised education and in-service training for health professionals.

21. Improved data collection to inform the provision of specialist services, tailored primary care and clear referral pathways for women affected by FGM.

22. Comprehensive community-based health promotion and support for new parents from FGM prevalent nations.

23. Co-ordinated legal child protection actions to effectively identify children at risk or those who have been cut, and appropriate and rapid referral pathways to the appropriate agencies for investigation and protection.

24. Research collaboration between countries of FGM prevalence and migration should be fostered to improve training and prevention programs.
